

The application of CARI in Verification Systems

YuShuang, Peking university

Instant listening recording function was used in our recording verification questionnaire of the verification system in 2014. It is similar to the ACASI's convenient recording loading, but also facilitates the inspectors not have to pick the recording which need to listen. It saved much time.

Our verification questionnaire gets fixed recording fields. After CARI extracted audio file and the recording fields is loaded in the verification questionnaire, inspectors can listen to the recording for verification when they meet such fixed fields.

But we also encountered a number of problems in ACASI, such as multiple recording file generated by the CARI for a single field, so that we're not sure which to load is the correct and effective recording file.
