

Post-collection Processing with Blaise in a Distributed Environment

Mary Laidlaw, Mike Rhoads and Jane Shepherd, Westat

Abstract:

In a recent project we faced the challenges of editing Blaise data in a distributed environment with multiple editors, coders and data reviewers. This paper reports on our experience in using Blaise editing capabilities and enhancements to support data delivery in a distributed editing environment using Citrix. The overall application incorporated other COTS collected data within Blaise datamodels and provided users with access to study metadata.
